E5CSV temperature controller
Ready, set, go!

» Perfect control
» Easy setting up
» Enhanced functionality
Keeping the best...
The new series shares many of the outstanding features that made its predecessor such a success – including easy setting-up using DIP and rotary switches, a large 7-segment LED display and choice of ON/OFF or PID control with Self-Tuning. What’s more, it still provides an indication of output and alarm status and direction of deviation from set point.

The E5CSV temperature-controller series is the enhanced successor to our E5CS series, the most widely sold temperature-controller that has established itself throughout the world as the ideal choice for simple, cost-effective temperature control.
Enhancing the rest...
Building on the success of the previous E5CS, however, the new E5CSV series offers much more. Like an Auto-Tune function and the fact that as standard you can now select multiple input types (thermocouple/RTD). A new 3.5 digit display also means that E5CSV can show a larger range, now extending up to 1999 °C. The series also meets new RoHS requirements and complies with the stringent IP66 standard. What’s more, depth has been reduced to a mere 78 mm.

Benefits of E5CSV temperature controllers:
• Easy setting-up using DIP and rotary switches
• Meets broad range of basic temperature-control requirements with only 4 models
• No expert knowledge needed to optimise performance because of Self- and Auto-Tuning functions
• Reduced chance of malfunction thanks to set-value protection
• End-user friendly since the menu only has 3 parameters
• Excellent legibility with a large (13.5 mm) single-line, 3.5 digit, 7 segment LED display
• Clear status overview thanks to PV-SV deviation indicator, output and alarm indicator
• Easy connection to a broad range of temperature-sensor types
Temperature Controllers  
E5CSV

Easy Setting Using DIP Switch and Simple Functions in DIN 48 x 48 mm-size Temperature Controllers

- Easy setting using DIP and rotary switches.
- Multi-input (thermocouple/platinum resistance thermometer).
- Clearly visible digital display with character height of 13.5 mm.
- RoHS compliant.

Model Number Structure

Specifications

■ Ratings

Supply voltage
100 to 240 VAC, 50/60 Hz

Operating voltage range
85% to 110% of rated supply voltage

Power consumption
5 VA

Sensor input
Multi-input (thermocouple/platinum resistance thermometer) type: K, J, L, T, U, N, R, Pt100, JPt100

Control output
Relay output
SPST-NO, 250 VAC, 3A (resistive load)

Voltage output (for driving the SSR)
12 VDC, 21 mA (with short-circuit protection circuit)

Control method
ON/OFF or 2-PID (with auto-tuning)

Alarm output
SPST-NO, 250 VAC, 1A (resistive load)

Setting method
Digital setting using front panel keys (functionality set-up with DIP switch)

Indication method
3.5 digit, 7-segment digital display (character height: 13.5 mm) and deviation indicators

Other functions
• Setting change prohibit (key protection)
• Input shift
• Temperature unit change (°C/°F)
• Direct/reverse operation
• Control period switching
• 8-mode alarm output
• Sensor error detection

Ambient temperature
-10 to 55°C (with no condensation or icing)

Ambient humidity
25% to 85%

Storage temperature
-25 to 65°C (with no condensation or icing)

■ Characteristics

Setting accuracy
Thermocouple (See note 1): ±0.5% of indication value or ±1°C, whichever is greater) ±1 digit max.

Platinum resistance thermometer (See note 2): ±0.5% of indication value or ±1°C, whichever is greater) ±1 digit max.

Indication accuracy
(ambient temperature of 23°C)

Influence of temperature
R thermocouple inputs: ±1% of PV or ±10°C, whichever is greater) ±1 digit max.

Other thermocouple inputs: ±1% of PV or ±4°C, whichever is greater) ±1 digit max.

Influence of voltage
Platinum resistance thermometer inputs: ±1% of PV or ±2°C, whichever is greater) ±1 digit max.

Hysteresis (for ON/OFF control)
0.1% FS

Proportional band (P)
1 to 999°C (automatic adjustment using auto-tuning/self-tuning)

Integral time (I)
1 to 0.1 s (automatic adjustment using auto-tuning/self-tuning)

Derivative time (D)
1 to 1,999 s (automatic adjustment using auto-tuning/self-tuning)

Alarm output range
Absolute-value alarm: Same as the control range
Other:
0% to 100% FS
Alarm hysteresis: 0.2°C or 1°F (fixed)

Control period
2/20 s

Sampling period
500 ms

Insulation resistance
20 MΩ min. (at 500 VDC)

Dielectric strength
2,000 VAC, 50/60 Hz for 1 min between current-carrying terminals of different polarity

Vibration resistance
10 to 55 Hz, 20 m/s² for 10 min each in X, Y, and Z directions

Shock resistance
10 to 55 Hz, 0.75-mm single amplitude for 2 hr each in X, Y, and Z directions

Life expectancy
100,000 operations min. (relay output models)

Electrical Weight
Approx. 120 g (Controller only)

Degree of protection
Front panel: Equivalent to IP66; Rear case: IP20; Terminals: IP00

Memory protection
EEPROM (non-volatile memory) (number of writes: 1,000,000)

EMC

EMI Radiated: EN 55011 Group 1 Class A

EMI Conducted: EN 55011 Group 1 Class A

ESD Immunity: EN 61000-4-2: 4 kV contact discharge (level 2)

8 kV air discharge (level 3)

Radiated Electromagnetic Field Immunity: EN 61000-4-3: 10 V/m (80-1000 MHz, 1.4-2.0 GHz amplitude modulated) (level 3)

10 V/m (900 MHz pulse modulated)

Conducted Disturbance Immunity: EN 61000-4-6: 3 V (0.15 to 80 MHz) (level 2)

Noise Immunity (First Transient Burst Noise): EN 61000-4-4

Burst Immunity: 2 kV power-line (level 3), 1 kV I/O signal-line (level 3)

Surge Immunity: EN 61000-4-5: Power line: Normal mode 1 kV, Common mode 2 kV

Output line (relay output): Normal mode 1 kV, Common mode 2 kV

Voltage Dip/Interrupting Immunity: EN 61000-4-11 0.5 cycle, 100% (rated voltage)

Approved standards
UL 61010C-1 (listing), CSA C22.2 No.1010-1

Conformed standards
EN 61326, EN 61010-1, IEC 61010-1, VDE 0106 Part 100 (finger protection), when the terminal cover is mounted.

Note: 1. The following exceptions apply to thermocouples.
   • U, L: ±2°C ±1 digit max.
   • R: ±3°C ±1 digit max. at 200°C or less

2. The following exceptions apply to platinum resistance thermometers.
   Input set values 0, 1, 2, 3 for E5CSV: 0.5% FS ±1 digit max.
   Input set value 1 for E5CSV: 0.5% FS ±1 digit max.
Installation

- All models in the E5CSV Series conform to DIN 43700 standards.
- The recommended panel thickness is 1 to 4 mm.
- Be sure to mount the E5CSV horizontally.

Mounting the E5CSV

1. For waterproof mounting, waterproof packing must be installed on the Controller. Waterproofing is not possible when group mounting several Controllers.
2. Insert the E5CSV into the mounting hole in the panel.
3. Push the adapter from the terminals up to the panel, and temporarily fasten the E5CSV.
4. Tighten the two fastening screws on the adapter. Alternately tighten the two screws little by little to maintain a balance. Tighten the screws to a torque of 0.29 to 0.39 N-m.

Dimensions

Note: All units are in millimeters unless otherwise indicated.

Controller

E5CSV

Hard Protective Cover

The Y92A-48B Protective Cover (hard type) is available for the following applications.
- To protect the set from dust and dirt.
- To prevent the panel from being accidentally touched causing displacement of set values.
- To provide effective protection against water droplets.

Terminal Cover

E53-COV10

Note: 1. The voltage output (12 VDC, 21 mA) is not electrically isolated from the internal circuits. When using a grounding thermocouple, do not connect output terminals 1 or 2 to ground. Otherwise, unwanted current paths will cause measurement errors.
2. Models with 100 to 240 VAC and 24 VAC/VDC are separate. Models using 24 VDC have no polarity.
## Operation

### E5CSV

#### Deviation indicators

The △ indicator lights when the PV is greater than the SP and the ▽ indicator lights when the PV is less than the SP. The ■ indicator (green) lights when the deviation is less than 1% FS (0.25% FS for multi-input models). These indicators flash during ST (self-tuning)/AT (auto-tuning).

#### Mode indicators

The SP indicator lights when the setting temperature is being displayed. The ALM indicator lights when the alarm value 1 is being displayed.

#### Mode Key

When the power is turned ON, normally the display will use the display items in the following order each time the Mode Key is pressed.

1. Power ON

2. PV

3. SP

4. Alarm value 1

5. This item is not displayed when the Control Mode Switch 4 is OFF.

6. Protect switch

7. Alarm indicators

8. Output indicator

9. Alarm mode switch (See note 1.)

10. Temperature range switch

#### Lock Release Key

When the protect switch is ON, the set value can be changed by pressing the Up and Down Keys while holding down the Lock Release Key.

#### PV, SP, Alarm Value, Input Shift Display

The display switches each time the ▲ Key is pressed.

#### Output indicator

Lights when the control output is ON.

#### Alarm indicators

- ALM1 (Alarm 1): Lights when the alarm 1 output is ON.
- ALM2 (Alarm 2): For future use.

#### Up Key

Pressing the Up Key increases the SP/alarm value display. Keeping the Up Key pressed continues to increase the display value. When the internal protect switch is ON, press the Up Key while holding down the Lock Release Key.

#### Down Key

Pressing the Down Key decreases the SP/alarm value display. Keeping the Down Key pressed continues to decrease the display value. When the internal protect switch is ON, press the Down Key while holding down the Lock Release Key.

### Settings before Turning ON the Power

#### E5CSV

1. Insert the tool into the two tool insertion holes (one on the top and one on the bottom) and release the hooks.

2. Insert the tool in the gap between the front panel and rear case, and pull out the front panel slightly. Grip the front panel and pull out fully. Be sure not to impose excessive force on the panel.

3. When inserting the E5CSV, check to make sure that the sealing rubber is in place and push the E5CSV toward the rear case until it snaps into position. While pushing the E5CSV into place, push down on the hooks on the top and bottom surfaces of the rear case so that the hooks are securely locked in place. Make sure that electronic components do not come into contact with the case.

Note: 1. The INIT switch is always OFF during normal operation.
1. Sensor Type Specification

Multi-input (Thermocouple/Platinum Resistance Thermometer) Models

• Using Thermocouple Sensors, Control Mode Switch 5: OFF

<table>
<thead>
<tr>
<th>Input</th>
<th>SP range</th>
<th>Setting number</th>

</tr>
</tbody>
</table>

The control range is -20°C to +20°C of the input temperature range.

Note: 1. The input indication range is the range that can be displayed for the control range (-99 to 1999). If the input is within the control range but exceeds the display range (-99 to 1999), values below -99 will be displayed as "---" and values above 1999 will be displayed as "+++." 2. If the unit is changed to 1 degree when the SP and alarm value for the temperature range are displayed in 0.1-units from 0.0 to 199.9 or 0.0 to 99.9, the values will be multiplied by 10 (e.g., 0.5 becomes 5). If the unit is changed in the reverse direction, the values will be divided by 10. After changing the range, set the SP and alarm value again.

• Using Platinum Resistance Thermometers, Control Mode Switch 5: ON

<table>
<thead>
<tr>
<th>Input</th>

</tbody>
</table>

The control range is -20°C to +20°C of the input temperature range.

Note: 1. The input indication range is the range that can be displayed for the control range (-99 to 1999). If the input is within the control range but exceeds the display range (-99 to 1999), values below -99 will be displayed as "---" and values above 1999 will be displayed as "+++." 2. If the unit is changed to 1 degree when the SP and alarm value for the temperature range are displayed in 0.1-units from 0.0 to 199.9 or 0.0 to 99.9, the values will be multiplied by 10 (e.g., 0.5 becomes 5). If the unit is changed in the reverse direction, the values will be divided by 10. After changing the range, set the SP and alarm value again.

ST (Self-tuning) Features

ST (self-tuning) is a function that finds PID constants by using step response tuning (SRT) when Controller operation begins or when the set point is changed. Once the PID constants have been calculated, ST is not executed when the next control operation is started as long as the set point remains unchanged. When the ST function is in operation, be sure to turn ON the power supply of the load connected to the control output simultaneously with or before starting Controller operation.

Executing AT (Auto-tuning)

AT (auto-tuning) is executed by pressing the Up and Down Keys for at least 2 s while the PV is displayed. The deviation indicators flash during auto-tuning (AT) execution. AT will be cancelled by performing the same operation that AT is executing during AT operation. Flashing stops when AT is completed.

Electrical Life Expectancy Curve for Relays (Reference Values)

![Electrical Life Expectancy Curve for Relays](image)

Mode Key Display Order

- If the SP falls outside the temperature range when the temperature range is changed, the SP will be displayed first. The SP will be changed automatically either to the minimum value or to the maximum value, whichever is nearest.
- If the alarm value falls outside the temperature range when the temperature range is changed, the alarm value will be displayed first. The alarm value will be changed automatically to the maximum value in the new temperature range.
2. Operation Settings

Use the control mode switches ( ) to change the control mode. (All switches are OFF for the default settings.)

</table>

### Note:
1. No alarm. The alarm value (alarm operation display) will not be displayed when the setting is 0 or 9 even if the selection key is pressed.
2. Standby Sequence Function (The standby sequence operates when the power is turned ON.)

For details on the position of the temperature range switch, control mode switches, and alarm mode switch, refer to page 4.
4. Using the Control Mode Switches

(1) Using ON/OFF Control and PID Control

(1.1) ON/OFF Control
The control mode is set to ON/OFF control as the default setting. To perform cooling control of freezers, etc., turn ON switch 3.

(1.2) PID Control
Turn ON switch 1 to use PID control.

1. Set the control period.
   - Performing Control via Relay Output, External Relay, or Conductor
     Switch 2: OFF (control period: 20 s)
   - Quick Control Response Using an SSR
     Switch 2: ON (control period: 2 s)

2. Set direct/reverse operation for the output.
   - Performing Heating Control for Heaters
     Switch 3: OFF
   - Performing Cooling Control for Freezers
     Switch 3: ON

(2) Using the E5CSV in Devices for Fahrenheit-scale Users
Displaying in °F
Turn ON switch 6 to display temperatures in °F.

Temperature Range for °F
The temperature is set to °F using the same temperature range switch as °C.

Note:
The control range for multi-input (thermocouple/platinum resistance thermometer) models is -40 to +40 °F of each temperature range.
The previous name J-DIN has been changed to L in accordance with revisions to DIN standards.

(3) Setting Input Shift
Turn ON switch 4, and after turning ON the power, press the Mode Key until h0 (indicates input shift of 0) is displayed. Press the Up and Down Keys to set the shift value.

Note:
When control mode switch 4 is turned OFF (no input shift display), the input shift is not displayed but the shift value is enabled. To disable input shift, set the input shift value to h0. The shift range depends on the setting unit.

5. Protect Switch
When the protect switch is ON, Up Key and Down Key operations are prohibited to prevent setting mistakes.
(2) Using the E5CSV in Devices for Fahrenheit-scale Users

(Displaying in °F)

Turn ON switch 6 to display temperatures in °F.

**Temperature Range for °F**

The temperature is set to °F using the same temperature range switch as °C.
